Final Project User Research Form

Date of the session: 12/12/2022

Type of user you are getting feedback from:
- Project Mentor

Number of users you receive feedback from:
- 1

What information were you trying to learn or understand?
Information we were trying learn was:
- The logical flow of our data story.
- The quality of our visualizations.

What questions did you ask or processes did you use to learn that information?
- We asked our mentor for advice on how to make our slide deck's content and visualizations better.

What did you learn?
- We discovered that paying attention to minute details might elevate a story's quality.
- We also discovered that slide titles that are appropriately aligned and short might better convey the logical flow of the data story.
- We also discovered that using backward links can support a slide's transition from a preceding slide.

What important questions remain unanswered (if any)?
- There were no significant unanswered questions.

How will you integrate what you learned into your next iteration or final product?
- We adopted every suggestion and included it into our presentations and visualizations. In the future, while creating presentations and visualizations, we'll make sure to integrate these suggestions.
